

QIS Power User

[2^{1/2} Day Course]

This two-day course bridges the gap between being able to use QIS and getting the most out of QIS in your organization. After completing the course, participants will have the additional skills to help in the identification, understanding and resolution of process/product related issues.

In addition, participants will be prepared to help other QIS users in your organization, providing another layer of application support.

Topics will include: configuration of processes and products; advanced variable and template configuration; document management; production management; reporting and analysis tools; and more.

This class will combine slides, discussion, demonstration and hands-on practice.

Target Audience: The class is designed for those with basic QIS experience who are responsible for process/products with a desire to increase their knowledge and help others.

Pre-requisites: Working knowledge of QIS

Topics Covered:
